Block & Inline

Conclusions

BLOCK	INLINE
Always start on a new line	Do not start on a new line
Take up as much horizontal space as possible (the full width of the container or browser window if there is no container)	Only use as much horizontal space as required by the content. Do not accept width and height CSS properties
Will respect width and height CSS properties	Margins will work horizontally, but not vertically
Horizontal and vertical margins both work	Padding works on all sides, but the top and bottom may overlap other elements.
