

Top HTML Interview Questions for Microsoft

1. What is the difference between HTML and HTML5?

- HTML5 introduces semantic elements, multimedia support, APIs (like localStorage), and mobile enhancements.
- HTML5 removes deprecated tags like and <center>.

2. What are semantic elements in HTML5? Why are they important?

- Tags like <section>, <article>, <nav>, and <header> provide meaning.
- Improve SEO, accessibility, and code readability.

3. Difference between id and class attributes?

- id: Unique, used once per page.
- class: Reusable, can be used on multiple elements.

4. What are the different types of HTML storage?

- localStorage: persists after tab close.
- sessionStorage: cleared on tab close.
- cookies: older, sent with every HTTP request.

5. What is the difference between <script>, <noscript>, defer, and async?

- <script>: blocks parsing.
- defer: executes after DOM load.
- async: executes immediately after download.
- <noscript>: displayed if JS is disabled.

6. What are global attributes in HTML?

- Common attributes usable on any tag: id, class, style, title, hidden, data-*, tabindex, draggable.

7. What is the difference between block-level and inline elements?

- Block: Starts on a new line and takes full width (e.g., <div>, <p>).
- Inline: Flows within text (e.g., , <a>,).

8. What are ARIA roles and why are they important?

- Helps assistive technologies understand UI elements.
- Examples: role='button', aria-label, aria-hidden.

9. What is the purpose of <!DOCTYPE html>?

- Ensures standards mode rendering across browsers.

10. Explain how HTML forms work with backend servers.

- Uses <form> with method (GET/POST) and action (URL).
- Sends data to backend in key-value pairs.
